

## MEDICAL CENTRE, BUNDABERG QLD

This purpose built regional medical centre of 1100sqm has been developed in a Queensland provincial city close to the existing public hospital. The predominant medical functions will be supported with ancillary retail outlets.

Emphasis in the design has been placed on the integration of signage and corporate identity as part of the overall fabric of the building. Highly visible shopfronts are protected by expansive awnings providing a unique visual aesthetic.

This building represents the start of a staged development which will result in an integrated facility providing further medical, support office and retail with pedestrian and vehicular connectivity.
